Professional profile

Computer Engineering student and Full-Stack Developer. I contribute to web, desktop and cross-platform products, from shaping user flows and building interfaces to integrating APIs and databases. My experience includes remote teams and management software for different sectors.

Professional experience

Freelance Full-Stack Developer · ZoomMergeLabs · Remote · June 2026 – Present

Development and maintenance of Meden, a fiscal, commercial and operations management platform. I work primarily on the cross-platform client built with Flutter and GetX, integrated with Go services deployed on Railway. I connect and stabilize API contracts, fix authentication and session flows, and evolve client, CFDI invoicing and quoting, SAT operations and plan modules.

- Stabilized authentication, token refresh and endpoint consumption between Flutter and the Go backend
- Fixed role-based navigation, forms, error states and responsive views across critical modules
- Implemented and maintained client, CFDI invoicing, quoting, SAT download and plan workflows

Technologies: Flutter, Dart, GetX, Dio, Go, Gin, PostgreSQL, Railway, REST APIs

Full-Stack Developer · Remote · KeoIT · Peru · March 2026 – June 2026

Cross-platform client development with Flutter/Dart for Android, iOS and Desktop. Implementation of Clean Architecture with Provider for session management and role control. Integration of interactive vector animations with Rive engine and Glassmorphism design. Participation in full-stack with Next.js in the web layer of the system. Reactive state management and decoupled architecture oriented to scalability.

- Web and cross-platform development, from interfaces to service integration.
- Configured role-based navigation and session management.
- Integrated Rive animations into a cross-platform interface.

Technologies: Flutter, Dart, Next.js, React, TypeScript, Clean Architecture, Provider, Rive

Full-Stack Developer · Industrias de Alimentos El Trébol · 2025 – 2026

LogMaster digitizes visitor registration and access management, with access tracking, role management and report exports for auditing.

- Covers arrival, waiting, admission, temporary exit, re-entry and visit closure.
- React/TypeScript client and Go API backed by PostgreSQL.
- Organized access permissions for administrative, operational and audit roles.

Technologies: Go, Chi, React, TypeScript, PostgreSQL

Education

Computer Engineering · Universidad Nacional Experimental Rómulo Gallegos (UNERG)
Expected graduation: mid-2027

Courses

Data Science, Prompt Engineering, SQL (Intro & Intermediate) · DataCamp
Java Fundamentals, Java OOP, Spring Boot · TodoCode

Technologies

Go, Chi, React, TypeScript, PostgreSQL, Astro, WebSockets, Next.js, Flutter, NestJS, Prisma, Expo, Vite, Dart, Node.js, React Flow, WXT, Chrome Extension, Java, Spring Boot, MongoDB, Docker, Python, Tkinter, NumPy, SciPy, Matplotlib, SQLite, JSON

Languages

Spanish (Native), English, French, Italian

Selected projects

Project	Technologies	Description
Visitors — LogMaster	Go, Chi, React, TypeScript, PostgreSQL	Visitor registration and access management for corporate facilities, including consent, photos and audit records.
Trickreport	Go, Chi, Astro, TypeScript, PostgreSQL, WebSockets	Multi-tenant help desk for managing support tickets, service agreements and support knowledge.
Chiguire	Go, Next.js, Flutter, PostgreSQL	Multi-tenant ERP for Venezuelan businesses, with fiscal and operating workflows designed to work offline.
Souvenirs	NestJS, Prisma, Next.js, Expo, PostgreSQL	A platform for photographers to manage clients, bookings, invoices and payments.
Web PDF Collection	WXT, React, TypeScript, Chrome Extension	Browser extension for saving user-selected pages and app states together in a PDF.
Preventive maintenance app (Private)	Flutter, SQLite, JSON	A private application for equipment inventory and maintenance history, shown without identifying its organization.
